

Transgressing proved patterns: knowledge creation, management and dissemination in the realm of AI

Predrag Pale

Faculty of Electrical Engineering and Computing, University of Zagreb, Croatia

Where does the whole hype about artificial intelligence (AI) come from? Is it the first time? Do we really have a true, general AI? If not, how soon shall we have it? How much will technology change everyday tasks, complete job descriptions, entire professions? Does it apply to scientific publishing and how? What do scientists really need in publishing, what can be done by AI and what is the job for a human?
